**ISSUE:**

Purchase of a 7000 gal., 1994 oil tank trailer to haul slurry oil for use in the Public Works Department.

**SYNOPSIS**

Kraft Tank Co, of Kansas City Mo has a used Brenner Stainless Steel asphalt tank needed to haul oil for our slurry seal operation.

**BACKGROUND:**

The Public Works Department has a 1978 (ICN# 750901) oil tank trailer that was bought used, when the City first started its slurry program in 1997. The tank is used everyday during slurry seal operations to haul oil from a vendor in North Salt Lake to the Public Works yard. The current tank is now beyond its serviceable years and may require extensive repairs just to pass safety standards. The Public Works Department needs a replacement for this tank to continue the slurry sealing operation. The Brenner tank would fit this operation and the tank would last the city for many years to come.

Purchasing a new tank would cost the city about \$90,000.00. Due to the limited amount of time we use this tank, buying a new one is hard to justify.

The tank is being sold as-is. There is no warranty. The delivery costs are included in the price of the tank.

**RECOMMENDATION:**

Approve the purchase of the Brenner Oil Tank from Kraft Tank Co. of Kansas Mo, in an amount not to exceed \$38,025.00
